AMENDMENTS

Listing of Claims

This listing of claims will replace all prior versions, and listings, of claims in the application.

Claims 1-26 (**canceled**)

Claims 27-39 (**withdrawn**)

[[35.]]40. (**currently amended**) A method comprising:

- a) providing an array composition comprising a population of microspheres comprising at least a first and a second subpopulation, wherein the microspheres of each subpopulation comprise:
 - i) a bioactive agent;
 - ii) at least a first and a second decoding attribute wherein at least one a first of said decoding attributes is an identifier binding ligand (IBL), wherein said IBL is different from said bioactive agent and wherein said identifier binding ligand is directly attached to said microsphere; and
- b) detecting each of said first and second decoding attributes to identify each of said bioactive agents.

Serial No.: 09/748,706
Filed: December 22, 2000

[[36.]]41. (currently amended) The method according to claim
[[35]]40, wherein said detecting comprises detecting binding of a decoder
binding ligand (DBL) to said IBL.

[[37.]]42. (currently amended) A method comprising:

- a) providing an array composition comprising a population of
microspheres comprising at least a first and a second subpopulation,
wherein the microspheres of each subpopulation comprise:
 - i) a bioactive agent;
 - ii) at least a first and a second decoding attribute wherein at
~~least one~~ a first of said decoding attributes is an identifier
binding ligand (IBL), wherein said IBL is different from said
bioactive agent and wherein said identifier binding ligand is
directly attached to said microsphere; and
- b) detecting each of said first and second decoding attributes to
identify each of said bioactive agents, wherein said detecting
comprises detecting binding of a decoder binding ligand (DBL) to
said IBL; and
- c) detecting binding of a first target analyte to said bioactive agent on said first
subpopulation of microspheres.

Serial No.: 09/748,706
Filed: December 22, 2000

[[38.]]43. (currently amended) The method according to claims ~~35 or 37~~ 40 or 42, wherein said IBL comprises a nucleic acid.

[[39.]]44. (currently amended) The method according to claims ~~35 or 37~~ 40 or 42, wherein said second decoding attribute is selected from the group consisting of a second IBL, microsphere size or microsphere surface texture.

[[40.]]45. (currently amended) The method according to claims ~~35 or 37~~ 40 or 42, wherein said first and second attributes are IBLs and are attached to said first subpopulation of microspheres at a first ratio and are attached to said second population of microspheres at a second ratio.

[[41.]]46. (currently amended) The method according to claims ~~35 or 37~~ 40 or 42, wherein said subpopulations are distributed on a substrate.

[[42.]]47. (currently amended) The method according to claims ~~35 or 37~~ 40 or 42, wherein said array is a liquid array.

Serial No.: 09/748,706
Filed: December 22, 2000

[[43.]]48. **(currently amended)** The method according to claims ~~35 or 37~~ 40 or 42, wherein said detecting is by fluorescence-activated cell sorter (FACS).

[[44.]]49. **(currently amended)** The method according to claims ~~35 or 37~~ 40 or 42, wherein said bioactive agent and said IBL are different molecules.

50. **(new)** A method comprising:

a) providing an array composition comprising a population of microspheres comprising at least a first and a second subpopulation, wherein the microspheres of each subpopulation comprise:

- i) a bioactive agent;
- ii) at least a first and a second decoding attribute wherein a first of said decoding attributes is an identifier binding ligand (IBL), wherein said IBL is different from said bioactive agent and said second decoding attribute comprises a physical attribute of said microsphere; and

b) detecting each of said first and second decoding attributes to identify each of said bioactive agents.

51. **(new)**) A method comprising:

Serial No.: 09/748,706
Filed: December 22, 2000

- a) providing an array composition comprising a population of microspheres comprising at least a first and a second subpopulation, wherein the microspheres of each subpopulation comprise:
 - i) a bioactive agent;
 - ii) at least a first and a second decoding attribute wherein a first of said decoding attributes is an identifier binding ligand (IBL), wherein said IBL is different from said bioactive agent and said first and second decoding attributes are independent of each other; and
- b) detecting each of said first and second decoding attributes to identify each of said bioactive agents.
